SUMMARY OF SEASONS IN MYSORE DURING THE YEARS 1897 TO 1903.

Owing to its situation between the Eastern and Western Ghats, the Mysore Province has the benefit of both the North-East and the South-West monsoons.

The crops depend upon both these monsoons, and the produce is called "Kartikay fasal" or "Vaisaka fasal" according to the time of ripening. The former corresponds with the months of November and December, and the latter, with the months of May and June.

Subjoined is a summary of the quantity and distribution of the rainfall during the seven years to which this return relates. The figures are taken from the Rainfall Registration Reports issued by the Director of Meteorology in Mysore.

1897.

Unlike the previous year which was one of partial deficiency, the average rainfall for the whole State was 42·93 inches or 6·25 inches above the Provincial average for the past 28 years. It was more evenly distributed than in 1896 when an excess in the malnad Districts of Hassan, Shimoga and Kadur set off against a deficiency elsewhere, and made up the Provincial average.

The season was on the whole favorable, and contributed to the well-being of the agricultural community, and extension of cultivation.

The following statement gives particulars of rainfall during the year as compared with the average for 28 years :—

Districts.	Actual rainfall during the year. (Inches).	Average rainfall for 28 years since 1870. (Inches).	Excess + or Defect — (Inches).
1	2	3	4
Bangalore	37·56	29·92	+7·64
Kolar	30·14	27·54	+2·60
Tumkur	32·88	26·05	+6·83
Mysore	33·06	27·19	+5·87
Hassan	42·04	35·22	+6·82
Shimoga	70·03	66·14	+3·89
Kadur	72·08	60·85	+11·23
Chitaldrug	25·66	20·55	+5·11
Provincial average ...	42·93	36·68	+6·25

1898

The agricultural prospects were good, and the year's rainfall, seasonable and copious. The average rainfall amounted to 41·48 inches against an average of 36·85 during 29 years since

306

1870. Agricultural conditions were normal, but the year was marked by the outbreak of the plague in August 1898. The statement at foot gives particulars relating to rainfall :—

District.	Actual rainfall in 1898. (Inches).	Average rainfall for 29 years since 1870. (Inches).	Excess + or Defect — (Inches).
1	2	3	4
Bangalore	35·54	30·12	+5·42
Kolar	32·45	27·72	+4·73
Tumkur	32·35	26·28	+6·07
Mysore	34·52	27·46	+7·06
Hassan	42·06	35·45	+6·61
Shimoga	73·09	66·39	+6·70
Kadur	70·18	61·17	+9·01
Chitaldrug	29·11	20·85	+8·26
Provincial average ...	41·48	36·85	+4·63

308

1899.

In this year, a scanty rainfall gave room for anxiety. The average for the whole Province was 28·92 inches which is 12·56 inches less than that for the preceding year, and 7·74 inches (=21 per cent) less than the average for 30 years since 1870.

The fall during March and April 1899 was much above the average; it was about the normal in May. These early showers led to early sowings which would eventually have resulted in a good harvest had the showers continued, but in June 1899, there was a noticeable deficiency. The falling off was very marked in July and August. The dry crops began to wither, and wet cultivation was set back in maidan parts for want of an adequate supply of water in tanks. Widespread scarcity was apprehended, and the tension was heightened by influx of immigrants from outside the State as a result of adverse seasons there. Happily, the situation assumed a favorable aspect by the copious showers which fell in September, and which covered the deficiency of the two previous months in all Maidan Taluks and brought in a sufficient supply of water to tanks everywhere. The uncertainty of seasons affected materially the area under crops, and the yield.

Subjoined is the statement showing the statistics of rainfall :—

District.	Actual rainfall in 1899. (Inches).	Average rainfall for 30 years since 1870. (Inches).	Excess + or Defect — (Inches).
1	2	3	4
Bangalore	24·37	29·92	—5·55

Kadur	46·19	60·65	—14·46
Chitaldrug	19·11	20·79	—1·68
Provincial Average ...	28·92	36·66	—7·74

309

1900.

Unlike the previous year, the rainfall recorded during the year was satisfactory, amountin to 39·46 inches against 28·92 inches in 1899 and 36·79 inches average of the past 31 year (1870—1900). The rainfall was more or less in excess of the average throughout the yea except in May when the record was below the average by 1·79 inches. The fall was seasonabl and well-distributed in respect of both monsoons. Under their influence, ample harvests an high prices more than compensated for the defects of the previous year.

The statement at foot gives particulars of rainfall during the year as compared with the 3 years preceding:—

District.	Actual rainfall in 1900. (Inches).	Average rainfall for 30 years since 1870. (Inches).	Excess + or Defect — (Inches).
1	2	3	4
Bangalore	28·73	29·86	—1·13

Kadur	63·09	60·73	+2·36
Chitaldrug	16·79	20·76	—3·97
Provincial Average	39·46	36·79	+2·67

1901.

During the 12 months which ended with December 1901, the rainfall throughout the Stat averaged 39·44 inches against 39·46 inches in the previous year and 36·86 inches for the pa 32 years since 1870.

In February, there was an unusual shower which averaged 1·23 inches throughout the Stat Otherwise, the monsoons were practically normal, and ample harvests and continued hig prices characterized the year.

The statement at foot gives particulars of rainfall in 1901:—

District.	Actual rainfall in 1901. (Inches).	Average rainfall for 32 years since 1870. (Inches).	Excess + or Defect — (Inches).
1	2	3	4
Bangalore	34·35	29·99	+4·36

Kadur	61·23	60·74	+0·49
Chitaldrug	21·38	20·78	+0·60
Provincial Average	39·44	36·86	+2·58

1902.

308

The quantity of rainfall amounted to 38·49 inches which was less by about an inch than the year previous, and over 3½ inches in excess of the average of the 33 years preceeding since 1870.

The agricultural situation was, on the whole, fair, the harvests were good, and the prices were, if at all, somewhat easier than during the previous year.

The subjoined statement gives particulars of rainfall during the year :—

District.	Actual rainfall in 1902. (Inches).	Average rainfall for 33 years since 1870. (Inches).	Excess + or Defect — (Inches).
1	2	3	4
Bangalore	29·86	30·01	—0·15

Kadur	66·22	61·20	+5·02
Chitaldrug	26·54	21·11	+5·43
Provincial Average ...	38·49	34·96	+3·53

1903.

This was a record year for heavy rainfall and breaching of several tanks in the maidan taluks. The pre-monsoon showers in April were below the average. Both the South-West and the North-East monsoons were above the normal, and the fall in the month of November alone was about 3½ times the average for 34 years. This breached tanks and damaged wet crops in the Kolar District. The year's rainfall recorded 51·12 inches against 38·49 inches in 1902 and 37·14 inches during the 34 years preceding. Except for this heavy fall, agricultural conditions were favorable.

The statement at foot will give an idea of the rainfall during the year as a whole :—

District.	Actual rainfall in 1903. (Inches).	Average rainfall for 34 years since 1870. (Inches).	Excess + or Defect — (Inches).
